

Web3

explained for beginners

#100DaysOfWeb3

Save For Later

So much hype around **Web3**,
well the hype is real.
Is **Web3** really worth
learning, is it really a
revolution as **Internet** was
few decades ago?

#100DaysOfWeb3

Everyone has their own opinion on this. But one thing for sure is that the **blockchain** which powers the whole **Web3** is going to revolutionize the future.

#100DaysOfWeb3

What is Web3?

Web3 is nothing but a set of new technologies mixed with **decentralized systems, Blockchain** and some cool buzzwords.

#100DaysOfWeb3

How Web2 worked?

Well, it was early 2000s
when **Web2** started
becoming popular and still
today the apps & website we
use are powered by **Web2**.

#100DaysOfWeb3

Web2 is really simple to understand, as there are just two sides involved to make the communication possible between users. One is the **Server** and the other is **Client**(Our browsers, Apps etc.)

#100DaysOfWeb3

We can call **Web2** a centralized system, where all the **data** is stored in a **central server** which is consumed by all the users.

But in the case of **Web3**, we call it **decentralized**, why?

#100DaysOfWeb3

Decentralization

The whole hype of Web3 is because of this one thing called **Decentralization**.

Because **Web3** is powered by **blockchain**, not the old **client-server** network, that's why it is loved by many.

#100DaysOfWeb3

Does decentralization really matters?

We have seen in the past
companies misusing our **data**
for their own monetary
benefits, in **Web3** these
problems are solved.

#100DaysOfWeb3

Final Takeaway

Web3 is amazing, but do not fall for it because of the hype, go for the technology which is powering it called **Blockchain**.
